Summary

Full Stack Software Engineer with 2 years of experience building scalable web applications, secure backend services, and cloud-ready microservices. Strong in Java, Spring Boot, React, Kafka, and SQL. Experienced in authentication systems, event-driven architectures, and production deployments. Adaptable, fast learner with hands-on startup execution and a focus on reliable, maintainable code.

Technical Skills

Languages:	Java, JavaScript, Python, SQL
Frameworks & Libraries:	Spring Boot, React, Kafka, Hibernate
Databases:	MySQL, PostgreSQL, MongoDB
Cloud & DevOps:	AWS (S3, EC2), Docker, Kubernetes, Jenkins, Nginx
Other:	Microservices, Socket Programming, Secure Application Design, Git, Agile/Scrum

Work Experience

Software Engineer

CYRAAC Services Jan 2024 – Present

- Developed full-stack features using Spring Boot and React, including designing and implementing an authentication and IAM system.
- Supported deployment, environment setup, server management, and production release lifecycles.
- Independently built the Policy Management module and integrated a RAG-based system that automatically evaluates policy compliance, reducing manual review effort by ~80%.
- Collaborated with cybersecurity teams to implement secure coding practices and strengthen product reliability for GRC applications.
- Designed and developed a centralized **Document Service** enabling other services to upload, download, and delete documents in AWS S3, and ingest data into a vector database for the centralized RAG system.

SDE Intern

CYRAAC Services Jul 2023 – Jan 2024

- Built full-stack application features and contributed to backend microservices.
- Implemented socket-based real-time features and secure SSO authentication workflows.
- Developed encryption/decryption modules, improving application-level security.

Projects

TOTP-Based Two-Factor Authentication System github.com/Sanmithra-L/totp-mfa-backend

- Built secure TOTP-based MFA using Spring Boot and React with QR-code enrollment.
- Integrated Google/Microsoft Authenticator for time-based OTP validation.

Event-Driven Order Management System github.com/Sanmithra-L/event-driven-order-management-system

- Designed the end-to-end event-driven order lifecycle, enabling decoupled services for order creation, payment, and fulfillment.
- Created Kafka-based event-driven microservices using Spring Boot and MySQL.
- Implemented Resilience4j (circuit breaker, retry) and Actuator metrics for observability.

Certifications

Data Structures & Algorithms – upGrad

Education

BNM Institute of Technology — B.E. in Computer Science Aug 2019 – May 2023

CGPA: 7.85/10
